Renewable Energy

- Renewable energy will reduce green house gases and fuel emissions.
- Its possible: Today in countries such as Iceland, Tajikistan, Paraguay, Albania and Lesotho 100 % of all energy generated comes from renewable sources.

Renewable Energy

- The problem with renewable energy is not just opinions of Governments and business but individuals are well.
- Many motorists do not believe that an electric vehicle has sufficient power.
- Most of the vehicles produced today are not electric powered.

Renewable Energy

- Most homes do not have solar panels or solar hot water systems.
- Some people opinion is based on outdated facts about renewable energy.
- Efficiency has improved over the last ten years. <http://spie.org/x39220.xml>
<http://phys.org/news/2011-05-nanostructures-solar-cell-efficiency.html>

Renewable Energy

- We will try to change everyone's opinion on renewable energy.

Renewable Energy

- Although China, Germany, the United States, Italy, and Brazil are aggressively pursuing the development and utilization of renewable energy not enough is being done.
- Unfortunately amount on investment into renewable energy is not sufficient.

Non-Renewable Energy

- Many Governments do not want to knock down old power plants and old dams that do not produce electricity.
- Japan and Ukraine have been building many nuclear power plants over the last decade.

<http://www.world-nuclear.org/info/inf79.html>

<http://world-nuclear.org/info/inf46.html>

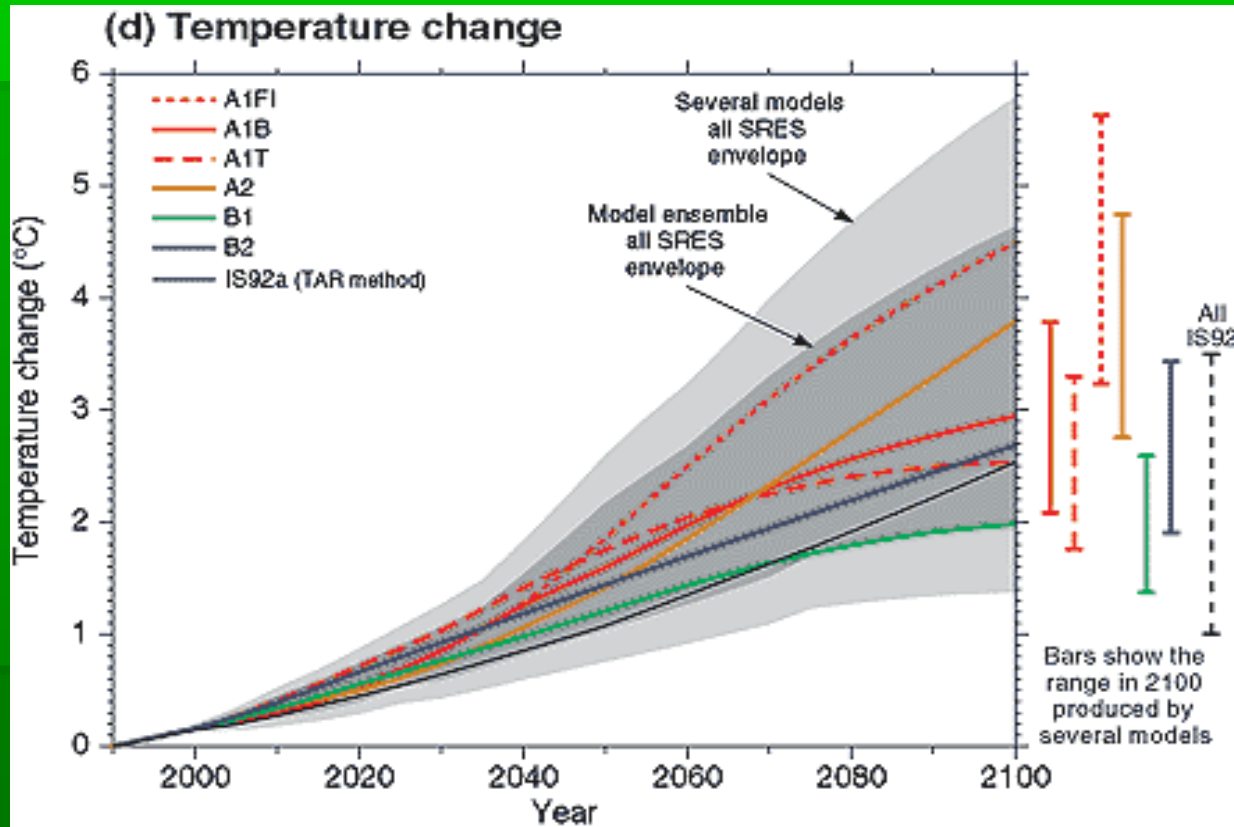

Non-Renewable Energy

- Certain Governments are even considering building more coal power stations (Philippines and Australia).
- Thus if we do nothing the use of non-renewable energy will not disappear any time soon.

Climate Change

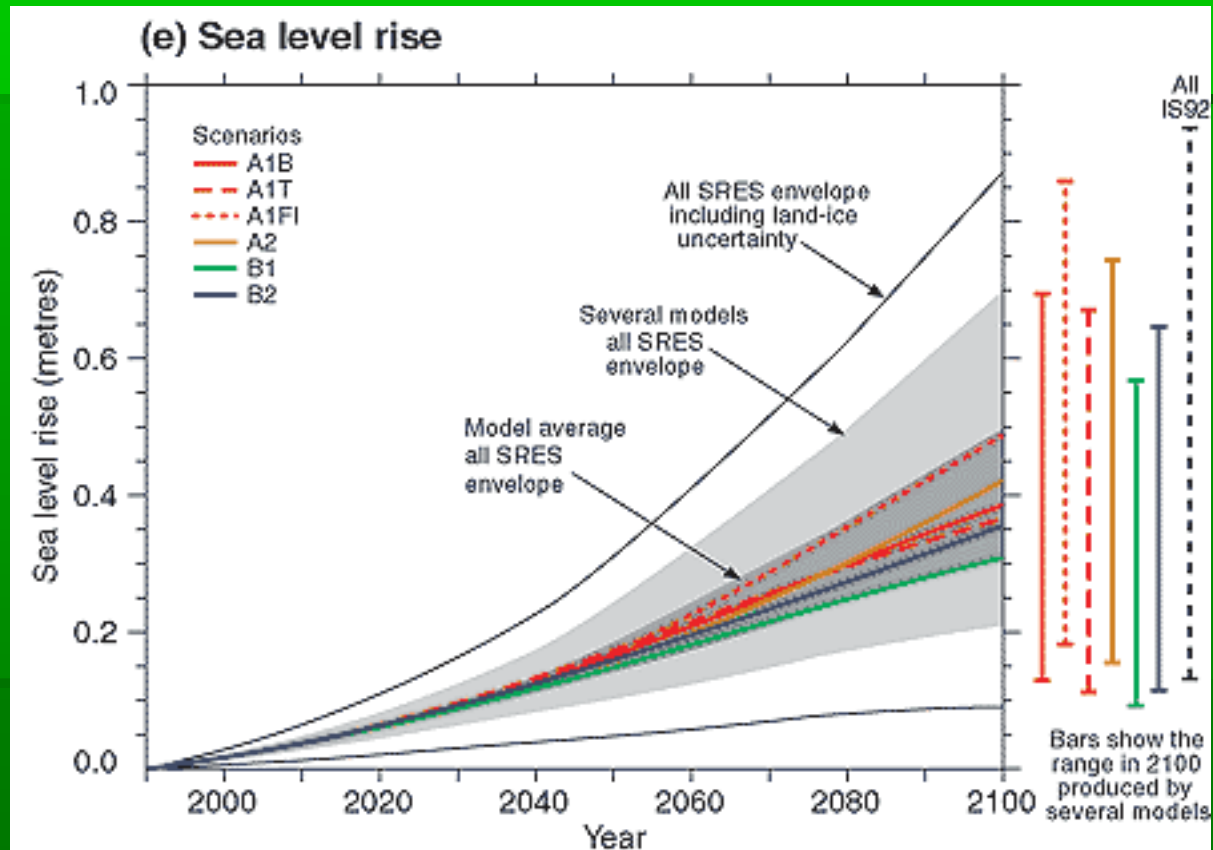

- The devastating environmental affects cannot be avoided with current levels of investment.
- Increase in world population will raise demand for energy resulting in more pollution and rising temperatures.

Nuclear Accidents

- List of nuclear disasters:
 - Chernobyl
 - Fukushima
- Sunken submarines of Soviet Union, USA and Russia.

What we will do?

- Advertising and promotion of renewable energy (email newsletters, social media, festival stalls),
- Research,
- Parcels with renewable energy devices to third world countries,
- Green lendings on <http://kiva.org> website,
- Environmental Exhibitions,
- Environmental Conferences.

Partnerships

- Hydro Drive (Thailand) - 2012:

Ask for Funding

- Fill in the form online to get funding for renewable energy generator, biofuel or battery.
- You might have to wait.

Newsletter

- The newsletter is emailed to members every six month.
- We do not send letters.
- You can submit your article for the newsletter.

Volunteering

- We need volunteers for:
 - Newsletter,
 - Presentations,
 - Seminars,
 - Event/exhibition stalls,
 - Graphic design,
 - Social media,
 - Festival stalls,
 - Advertising.
- Police check is not required for some of those positions.

Survey

- We care about the opinion of our sponsors, members, volunteers and audiences.
- We value your time.
- Please fill in the survey form on the website.

Posters

- You should submit your own graphic design for renewable energy and we will publish it in our newsletter and website.

Sponsorships

- If your company sponsors us then:
 - We can upload your logo on our website with your site link attached.
 - We will put your logo in posters and promotional material.

Advertising

- You can printout our flyers/forms and distribute them to friends.
- We advertise via:
 - internet,
 - posters,
 - flyers.

Advertising

- Future plans include radio and TV advertising.
- We are an environmental organisation and thus concerned about use of resources in our promotional materials.

Conclusion

- At the moment the view on renewable energy is very negative.
- Thus a lot of work needs to be done.

Conclusion

Thank you for your attention
